Public Parks vs. Public Health.

J. H. G.

New York Daily Times (1851-1857); Jun 30, 1853; ProQuest Historical Newspapers: The New York Times

pg. 3

The city of Boston, with its pleasant parks and green squares, is generally regarded as the healthiest city in the United States. It is believed that the open spaces and fresh air of the parks are conducive to good health.

On the other hand, the city of New York, with its crowded streets and lack of green space, is generally regarded as the unhealthiest city in the United States. It is believed that the lack of fresh air and the overcrowding of the city are detrimental to health.

The question of whether public parks are beneficial to public health is a matter of much debate. Some argue that public parks provide a healthy environment for the city's residents, while others argue that they are a waste of money and that the money could be better spent on other public services.

In conclusion, the question of whether public parks are beneficial to public health is a matter of much debate. It is up to the city councils and residents to decide whether or not they believe that public parks are worth the money and effort it takes to maintain them.
