Instructions for posting a link to the blog

1.) Log in to Blogs @ Baruch at http://blsciblogs.baruch.cuny.edu/

2.) Once you are logged in, you will see a grey bar at the top of the window.

Go to “My Blogs> Our class blog > New Post”
3) Give your post a title that is descriptive – something with your name so we know who you are. Add text to the post.

4) To add a link, highlight the text that you want to make clickable and click the link icon that looks like some links in a chain.
Next, open your project in another browser window and copy the URL.

Paste that URL into the Insert/edit link dialog box and click the Add Link button when you are done.

You will see that the words you highlighted have become a link.
And if you switch from the Visual tab to the HTML tab, you'll see that WordPress has added an `<a>` tag with the href you specified in the dialog box.

5) The next thing you need to do is to make sure you check the appropriate category from the Categories sidebar at the right of the screen. In this example, we are checking “Project 02.”

6) Finally, click the blue “Publish” button to publish your post on the site.
